16 - 18.9 | 19 - 19.8

P86-09 Population Estimation and Forecasting Unit

HIGHLIGHTS

- Washington's estimated April 1, 1986 population is 4,419,700. This is an increase of 35,600 (0.8 percent) over last year's population of 4,384,100. Natural increase (births minus deaths) accounted for all of the state's growth over the 1985-86 period. Net migration, which was estimated at 21,300 last year, dropped to 100 for the current period.

- The state's armed forces personnel dropped from 61,280 in 1985 to 59,590 in 1986. This decline is largely due to the fact no large naval carriers were undergoing repairs at the Puget Sound Naval Shipyard in Bremerton in April. Naval personnel and naval dependent counts for the Puget Sound Naval Shipyard, and housing under naval jurisdiction, dropped from 6,312 in 1985 to 2,358 in 1986. This population loss (one of nearly 4,000) had a noticeable impact on the 1985-86 estimate of net migration for the state.

- Forty-eight cities and towns conducted an actual count of their population in 1986.

- Between 1980 and 1986, cities and towns annexed 92.05 square miles of land inhabited by 25,757 people.

- Washington's nonwhite population has grown by 24.1 percent since 1980. Asians show the largest growth of all the state's nonwhite populations, increasing from 110,052 in 1980 to 152,730 (38.8 percent) since 1980.

- The number of marriages and divorces in Washington have declined for the fourth consecutive year. From 1981 to 1985, marriages dropped from 49,973 to 43,771; divorces dropped from 29,511 to 26,512.

PREFACE

Population Trends provides current demographic data for cities, towns, and counties in Washington State.

The 1986 city and town estimates will be used in the allocation of state revenues beginning January 1987 (RCW 43.62.030). The 1986 estimates of unincorporated area populations will be used to allocate state liquor sales profits to counties beginning September 1986 (RCW 66.08.200) and liquor excise tax revenue beginning October 1986 (RCW 82.08.170).

1986 estimates of Washington's population by racial categories and of the Spanish Origin population are included in this year's publication and will continue to be published at two year intervals.

The Technical Notes section contains several reports of interest. These include an article on the elderly population in Washington, changes in household size since 1980, and a forecast of county population by age and sex to the year 2000.

We continue to encourage anyone who prepares population estimates for cities, towns, or counties to share their experiences and knowledge by submitting an article for publication.

ACKNOWLEDGEMENTS

Special thanks are given to the following persons and agencies because of their continued help and cooperation in the publication of Population Trends: the Vital Statistics Health Data Section, Department of Social and Health Services, for supplying vital statistics data; the Office of Research and Data Analysis, Department of Social and Health Services, for providing selected institutional population counts; the Department of Veteran's Affairs, for furnishing veteran institutional counts; the housing directors of the colleges and universities, for submitting April 1 dormitory counts; the Armed Forces personnel at major bases in the state for contributing excellent data on current armed forces counts; and all of the city staff, and county and regional planners for providing data used in the development of our April 1 estimates.

We welcome comments regarding the content or format of this publication.

NOTE:

1. The county and municipal populations shown for 1980 are, with a few exceptions, the 1980 federal census final counts. Jurisdictions will be advised if any further corrections are received. Federal census counts have been adjusted for annexations from January 1, 1980 to April 1, 1980.

2. (*) State Certified Special Census. A population count that meets all special census certification requirements. Also indicates cities and towns with March 1, 1980 city special census count greater than the federal 1980 census count.

3. (#) Informal Count. A population count that is considered accurate but does not meet all special census certification requirements.

4. The 1981 estimates have been revised on the basis of corrections to the 1980 census counts that were provided by the Bureau of the Census in correspondence dated August 18, 1981 and February 18, 1982.

   ($) Indicates a correction to the 1980 census count and/or a revised 1981 estimate.

   With the exception of corrections to the federal census counts, annual estimates in this official series are not revised on the basis of other information that becomes available after the estimate date. As a result, population estimates shown for the individual years, from 1981 through the current estimate date, may not be comparable. Figures often vary due to data corrections or the use of new survey or census data that are not available on an annual basis. Revised county estimates are published regularly in the Components of Population Change Section.

5. Mill Creek incorporated in September, 1983.

TABLE 2 (CONT.)

HOUSING UNITS BY STRUCTURE TYPE
FOR CITIES, TOWNS AND COUNTIES
STATE OF WASHINGTON
1980 AND 1986

NOTES:

1. THE COUNTY AND MUNICIPAL HOUSING UNITS SHOWN FOR 1980 ARE, WITH A FEW EXCEPTIONS, THE 1980 FEDERAL CENSUS FINAL COUNTS. FEDERAL CENSUS COUNTS HAVE BEEN ADJUSTED FOR ANNEXATIONS FROM JANUARY 1, 1980 TO APRIL 1, 1980.

2. (*) STATE CERTIFIED SPECIAL CENSUS. A HOUSING UNIT COUNT THAT MEETS ALL SPECIAL CENSUS CERTIFICATION REQUIREMENTS. ALSO INDICATES CITIES AND TOWNS WITH MARCH 1, 1980 CITY SPECIAL CENSUS COUNT GREATER THAN THE FEDERAL 1980 CENSUS COUNT.

3. (#) INFORMAL COUNT. A HOUSING UNIT COUNT THAT IS CONSIDERED ACCURATE BUT DOES NOT MEET ALL SPECIAL CENSUS CERTIFICATION REQUIREMENTS.

4. (E) ESTIMATED HOUSING UNITS. THE INFORMAL POPULATION COUNT DID NOT PROVIDE AN ACCURATE HOUSING UNIT COUNT.

5. (S) INDICATES A CORRECTION TO THE 1980 CENSUS COUNT.

6. MILL CREEK INCORPORATED IN SEPTEMBER, 1983.

7. (**) THE MOBILE HOME AND TRAILER DATA FOR MOST UNINCORPORATED AREAS EXCLUDE CHANGES IN MOBILE HOME PARKS FOR ALL OR PART OF THE 1980-86 REPORTING PERIOD. MOBILE HOME AND TRAILER LOSSES TEND TO BE UNDERREPORTED. THE NUMBER OF MOBILE HOMES AND TRAILERS IN AREAS THAT HAVE EXPERIENCED A LARGE OUTMIGRATION (SUCH AS BENTON AND GRAYS HARBOR COUNTIES) WILL TEND TO BE OVERESTIMATED.

8. HOUSING UNIT ESTIMATES ARE REVISED ON AN ANNUAL BASIS TO INCLUDE THE MOST CURRENT DATA AVAILABLE.

9. IN A FEW CASES, THE 1980 FEDERAL CENSUS DATA HAVE BEEN PROVEN TO BE IN ERROR BY SUBSEQUENT CENSUSES (E.G. GOLD BAR, LA CENTER AND PALOUSE).

10. IN THE 1980 FEDERAL CENSUS, 15 TO 20 PERCENT OF THE MOBILE HOMES AND HOUSE TRAILERS IN WASHINGTON WERE CLASSIFIED AS SINGLE FAMILY HOUSES. A NEGATIVE FIGURE IN THE MOBILE HOME/TRAILER CATEGORY INDICATES A CITY HAS LOST MORE MOBILE HOMES/TRAILERS THAN WERE COUNTED IN THE 1980 CENSUS. WHEN USING THE HOUSING DATA, THE NEGATIVE NUMBERS SHOULD BE SUBTRACTED FROM SINGLE FAMILY HOUSING.

Note: This series of estimates corrects for the coverage errors in the 1970 census, and will not match previously published estimates of the population age 65 years and over.

1970 census population age 65 years and over corrected for coverage errors. A state level adjustment factor was used to correct 1970 census county population as more detailed correction factors were not available. The state correction factor was developed from series SOR 31- WCF-1 BACF-1 described in Demographic Estimates of the Coverage of the Population of States in the 1970 Census: Demographic Analysis, Current Population Reports, series P-23, No. 65, released by the Bureau of the Census in a memorandum to Federal-State Cooperative Program members, April 6, 1983.

Note: Armed forces personnel reflects resident military personnel as defined by the U.S. Bureau of the Census. Annual estimates are developed on the basis of July 1 station strength counts by the Department of Defense and information provided by military installations in Washington. Sharp variations in the figures for Kitsap County reflect changes in the number of ships and naval personnel at the Puget Sound Naval Shipyard.

Other	35,864	76,556	40,692	113.5	85,653	9,097	11.9
Spanish Origin[4]	57,358	120,016	62,658	109.2	132,409	12,393	10.3

[1]Specific populations included in each racial category are shown below:

White: Peoples of Europe, North Africa, and Middle East

Black: Negro, African, Black Puerto Rican, West Indian

Indian: American Indian

Asian: Japanese, Chinese, Filipino, Korean, Hawaiian, Asian Indians, South East Asians, Vietnamese, Pacific Islanders, Guamanian, Samoan

Other: Cuban, Puerto Rican, Mexican, Dominican, Central and South American. The Other Races category is primarily a count of persons who marked "Other Race" on the 1980 census questionnaire and wrote in entries such as Cuban, Puerto Rican, Latino, Mexican, Dominican, etc. They represent persons who, when given an opportunity to identify themselves in a racial category, did not select White (or any other category provided), but specifically identified themselves as being Mexican, Puerto Rican, Latino, etc. In 1980 this category represented a tabulation of 67,154 Spanish persons who considered themselves racially Spanish and some 9,402 additional responses that could not be elsewhere classified.

[2]Census definitions used to tabulate the population by race changed in 1980. 1970 census counts have been adjusted to match 1980 counts.

[3]1980 Federal Bureau of the Census Summary Tape File 1(STF1) total counts.

[4]Spanish Origin is not a race category; it may be viewed as a nationality group. Persons of Spanish Origin may be of any race and are counted in the racial categories shown. In 1980, 44.4 percent of the persons who indicated they were of Spanish Origin identified themselves as being racially White; 47.6 percent selected the Other Races category. Very small percentages identified themselves as being Black (1.3 percent), Indian (2.3 percent) or Asian (4.4 percent).

NOTE: Estimates for racial and Spanish Origin categories are variable because of the small numbers involved. Caution is advised in interpreting 1980-86 change for categories of less than 500 persons.

[1]The Other Races category is primarily a count of persons who marked "Other Race" on the 1980 census questionnaire and wrote in entries such as Cuban, Puerto Rican, Latino, Mexican, dominican, etc. They represent persons who when given an opportunity to identify themselves in a racial category did not select white (or any other category provided), but specifically identified themselves as being Mexican, Puerto Rican, Latino, etc. In 1980 this category represented a tabulation of 67,154 Spanish persons who considered themselves racially Spanish and some 9,402 additional responses that could not be elswhere classified.

[2]Spanish Origin is not a race category; it may be viewed as a nationality group. Persons of Spanish Origin may be of any race and are counted in the other racial categories shown. In 1980, 44.4 percent of the persons who indicated they were of Spanish Origin identified themselves as being racially white; 47.6 percent selected the Other Races category. Very small percentages identified themselves as being black (1.3%), Indian (2.3%) or Asian (4.4%).

[3]1980 Federal Bureau of the Census Summary Tape File (STF1) total counts.

[4]1980 Federal Bureau of the Census STF1 counts with adjustments from sample count STF3 data. To expedite the processing of total count items, the U.S. Bureau of the Census did not reclassify Asian "write in" responses (e.g., Laotian, Cambodian, Fiji Islander, Pakistani), to the Asian category. Thus, total count tabulations undercount Asians and overstate Other Races. The Asian category shown includes 102,537 Asians counted in STF1 and 7,515 Asian write in responses identified by county in the processing of sample count items in STF3. The Other Races category shown represents the 84,071 Other Races tabulated in the complete count processing less the 7,515 Asian write in responses identified by county in the sample count (STF3) processing and moved to the Asian category.

[5]1986 estimates of the Spanish Origin population were developed from the 1986 estimates of the population by racial category: The 1980 number of Spanish Origin persons in each racial category was divided by racial category total (e.g., black of Spanish Origin/total black). These proportions were applied to the 1986 racial category estimates and summed to derive an estimate of total Spanish Origin population. It was assumed that none of the Asian write in responses temporarily tabulated in the Other Races category in STF1 identified themselves as being of Spanish Origin.

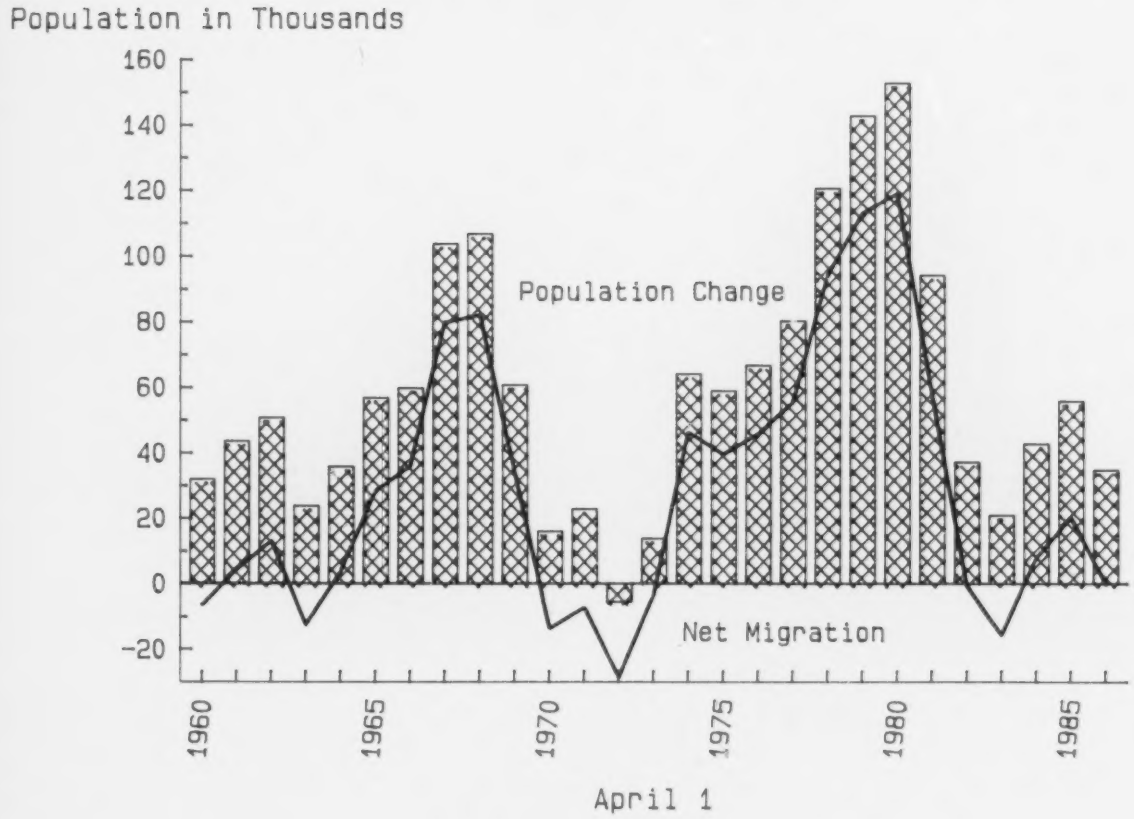
FIGURE 2

POPULATION CHANGE AND NET MIGRATION
STATE OF WASHINGTON
1960 - 1986



- The components of population change in Washington reflect the state's economic fluctuations. During the rapid economic expansion of the late 1960s and 1970s, when the annual state population growth rate was three percent or higher, net inmigration accounted for approximately 75 to 80 percent of the state's population change.

- Slower growth periods are characterized by the net loss of persons seeking employment opportunities in other states, with natural increase (births - deaths) accounting for the state's population increase.

Note: 1980 census counts include corrections for King (149), Kitsap (543), Lewis (746), Pierce (24), Snohomish (704), and Okanogan (24) counties. The 1981 estimates for the state and counties were recalculated using 1980 population counts by age which were not available in the spring of 1981.

Vital events are estimated for January 1985 through March 1986. Detail may not add due to rounding.

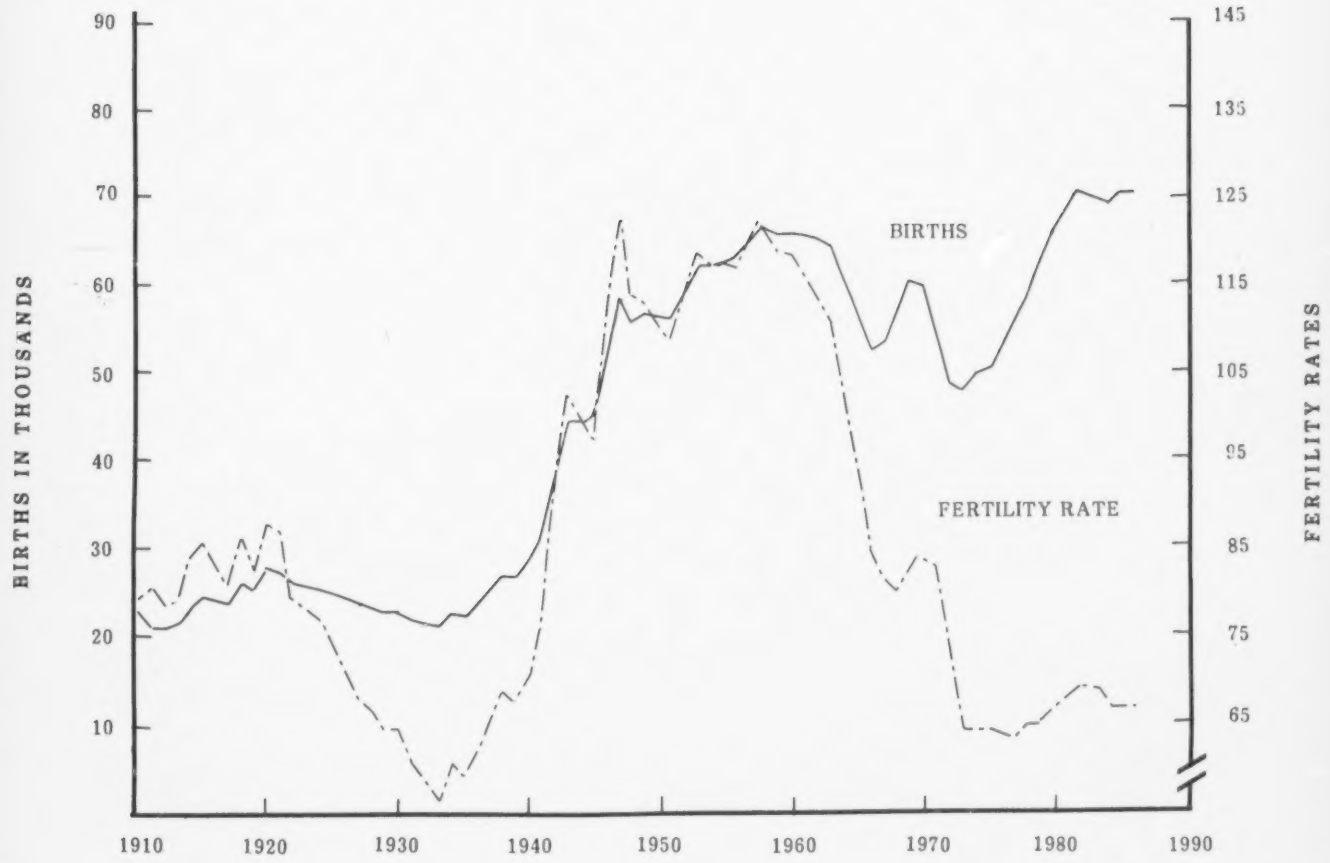
FIGURE 3

BIRTHS AND BIRTHS PER 1,000 WOMEN 15-44 YEARS
STATE OF WASHINGTON
1910-1986



- The number of births in Washington, which steadily increased from 47,697 in 1973 to 70,051 in 1982, is remaining relatively high. There were 69,463 births in 1983, 68,477 in 1984, 69,600 (estimated) in 1985, and 69,907 (estimated) in 1986.

- The fertility rate (number of births per 1,000 women of childbearing age) has declined from rates of over 100.0 during the 1950s and early 1960s, to a current low level of 66.6.

- The trend away from early marriage and early childbearing is expected to continue, as is the preference for smaller families. The average number of children expected by married women aged 18-24 years declined from 2.9 in 1967 to 2.2 in 1974, and has remained essentially constant.

TECHNICAL NOTES

WASHINGTON'S ELDERLY POPULATION: AN OVERVIEW

by

Carol Welch

The interest in persons 65 years and older continues to mount. Numerically and proportionately, the elderly are increasing. This change in age structure has been referred to as "the greying of America." The aging of our society is the result of well-known demographic forces: declining fertility rates (with the exception of the "baby boom"); medical advances in infant and maternal mortality which added about 26 years to the average life span since 1900; and the influx of 17 million immigrants during the first quarter of the century (Fowles, 1978).

The 1960s mark the turning point for the nation's elderly. For the first time, their rate of growth exceeded that of those under 65. The current spurt of growth is due primarily to the continuous increase in the annual number of births prior to 1920 and only secondarily to improved life expectancy. This trend of faster growth by the older population is expected to persist until 1995. Then, there will be a slowdown between 1995 and 2010 as the smaller cohort of Depression babies reaches age 65. By 2010, however, there will be a dramatic upsurge in the numbers of persons 65 years and older as the "baby boom" group matures. After 2030, the "baby bust", those born between 1965 and 1973, will cause the rate of growth to slow (Taeuber, 1983). Medical improvements will allow more of those attaining old age status to survive to older ages so that even with a lower rate of growth, the elderly will become more dominant in the age structure during the twenty-first century.

The trend of rapid growth among the aged appears to have taken hold in Washington during the 1970s and is likely to follow the national patterns through the turn of the century, with some differences in timing. Over the last decade, Washington's elderly population began an upward surge, growing from 327,160 to 431,562 (see Table 1). This 32 percent change in the number of persons 65 and older surpasses the state's overall population growth (a 21 percent change). The numbers of elderly in Washington have continued to swell, exceeding the half million mark in 1986 (511,370).

The distribution of senior citizens among Washington's counties is also subject to the same trends described above. The greatest percent increases in older persons for individual counties occurred in the last decade. Between 1970 and 1980, 72 percent of all counties in Washington showed gains in persons aged 65 and over relative to their total population. From 1980 to 1986, all the counties show an increased proportion of the elderly to their total population.

Older persons are concentrated in three types of areas within the state (refer to Figure 1). The first type has resort settings with

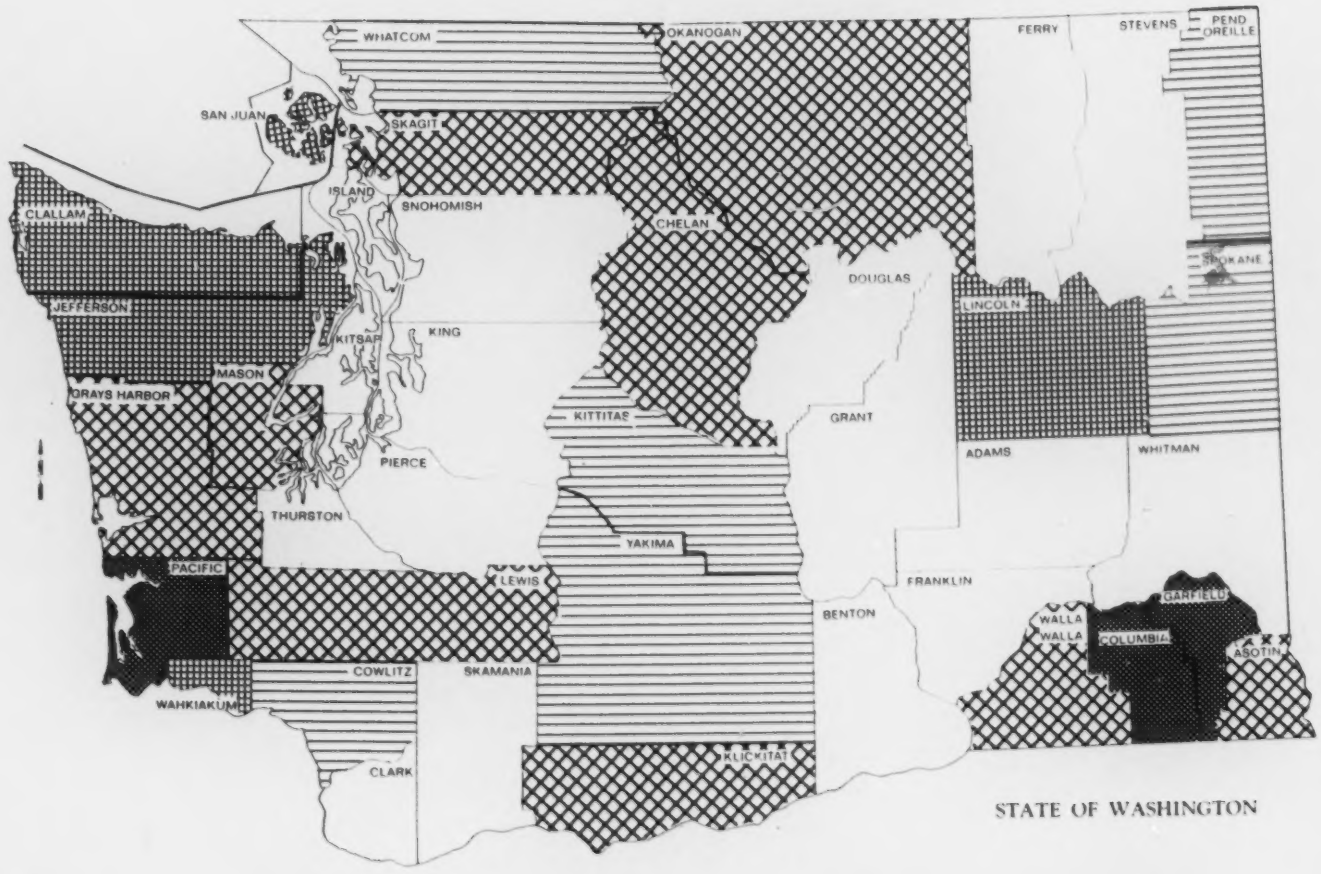
Persons 65 Years and Older as a Percent of Total Population: 1986



OFM/F
7/86

amenities appealing to retirees. The second is typified as rural with a farm economy that loses its young adults and retains much of its older population. The third combines attributes of the two. It has some of the resort-type settings, yet has a slow economy.

San Juan, Clallam, and Jefferson, each of which had large numbers of elderly inmigrants from 1970 to 1980, are examples of counties comprised of resorts. Columbia, Garfield, and Lincoln represent the second type of area described above. Each had net outmigration of young adults between 1970 and 1980 and maintain a large elderly population relative to their total county population (over 18 percent in 1986). Some counties, such as Pacific, are somewhat of a mix between the two types.

The four most heavily populated counties in the state, King, Pierce, Snohomish, and Spokane, account for 56 percent of the state's elderly population in 1986. Over time, these counties have shown incremental gains, with the aged slowly increasing as a proportion of these county's populations. They are not, however, as distinct a group as might be found in other counties. The elderly, as a proportion of total population, range from nine percent in Snohomish to 13 percent in Spokane.

Older persons in Benton, Ferry, and Franklin represent a small, but notably expanding proportion of the population in these counties. Benton has lost population over the six-year period while Ferry and Franklin each have had low rates of population growth. When an area experiences population declines or low growth, it is often because the economy is sluggish or has weakened. This results in outmigration of persons of labor force age with few young persons migrating into these areas to replace them. Older persons, who migrate less frequently, stay behind where they have lived most of their adult lives and contribute toward a greater share of the county's population.

Even though the elderly migrate at half the rate as younger persons, they do relocate and have become more and more mobile. The migration patterns of older persons are split into two age groups: those 55 to 74 years old and those 75 years and older. Migration streams for the first group, between 1975 to 1980, were three times as likely to flow from metropolitan areas to nonmetropolitan areas than the reverse. For those 75 years and older, metropolitan areas were as likely destinations as were nonmetropolitan areas. The difference between the two age groups can probably be explained by variables such as medical care, widowhood, the desire to be near relatives, and somewhat decreased physical mobility among the more aged (Taeuber, 1983).

Older persons who do move to nonmetropolitan areas are motivated by push and pull factors. They may be repelled by negative aspects of urban life, which include crime, depersonalization, skyrocketing living costs, and a fast pace of life. On the other hand, retirees may be attracted to the slower, less stressful pace of life found in rural or small town areas. Preexisting ties to the nonmetropolitan area, in the form of family, friends, or property, are also

commonplace. These connections help dispel feelings of loneliness, isolation, and the fear of victimization, which often accompany a move and allow links to the community to develop fairly rapidly.

The number of retirees has continued to multiply as the average age of retirement has declined. Private pensions, social security, and medicare have made early retirement more readily attainable by more individuals. Many of the elderly have a comfortable margin of income to expenditures, allowing them a greater range of choices in their lifestyle. The choices are bounded, to some degree, by changes in their service needs. Persons 65 years and older often require extended medical attention and may need to adhere to dietary restrictions. Although over 50 percent own their houses, the elderly may find the upkeep of a house excessive.

The older generation presents a challenge to decision makers to establish a comprehensive and coordinated network of services that addresses its needs. Providing special housing and medical services for the elderly will require expanding resources as their numbers increase. This challenge may be especially difficult for rural and low growth areas to meet, but they are the ones that tend to have greater concentrations of elderly in their population. The commitment of additional resources to this growing segment of their population, however, can help persuade their aged to stay rather than leave to seek services elsewhere. By committing resources to the older population, some inmigration of elderly may be stimulated to areas able to provide services to retirees.

The elderly are, as a whole, relatively healthy. It is not until age 85 that about half of the older population indicate that they have a debilitating condition that limits a major activity. The elderly do, however, have chronic illnesses requiring medical attention. Of those 65 years and older, 80 percent report at least one chronic condition and many have multiple chronic illnesses (Taeuber, 1983). This points to the continuing need for available, accessible medical services, some of which can be supplied by health providers, such as visiting home nurses, dieticians, and podiatrists.

Living independently is becoming more prevalent among those 65 years and older. Since 1960, the number of elderly living alone has increased threefold beyond what would have been expected given the size of the aged population alone (Fowles, 1978). Housing that allows alternatives to owning and maintaining a house, living with family, or institutionalization is of primary importance for the elderly. A somewhat recent development is the senior citizen apartment complex. These multiple unit structures are designed so that seniors can remain self-reliant, but have safeguards such as emergency summoning devices, buddy systems, and increased building security. Some have medical staff and facilities, as well.

Many cities have senior citizen apartments that date back to the 1970s, but the majority have been built during the 1980s. Construction of new senior apartments is planned and building is

underway in numerous communities, even in areas of low growth, because the demand is so great. Typically, the senior apartment complexes are at full capacity and have waiting lists.

Cities with senior citizen apartments often have nursing homes. Like the senior apartments, nursing homes are usually near full capacity. The need for long-term care facilities is building as the number of persons 75 years and older increases and as the gap in life expectancy between the sexes widens. Three-quarters of the elderly who are residents of nursing homes are widowed or divorced compared with 40 percent of the noninstitutionalized elderly. One of the critical determinants in institutionalization of older persons is the absence of a spouse to act as caregiver (Taeuber, 1983). The creation of housing for seniors and the provision of long-term care facilities for the aged reflect the community's response to the needs of this special population.

The social service delivery system will be inundated in less than 25 years with persons 65 years and older when the "baby boomers" reach old age. As medical advances are made, it is expected that people will live longer, healthier lives. Even so, older persons will require variations on the same types of services provided to the elderly of today. Planning for the future infers planning for the aged and the cities that are meeting the challenges of today's elderly and planning for those of tomorrow will be best able to offer a comprehensive, coordinated network of services to senior citizens.

HOUSEHOLD SIZE TRENDS FOR WASHINGTON CITIES THAT HAVE CONDUCTED A CENSUS SINCE 1980

by

Carol Welch

Over one-third of all cities in Washington have enumerated their populations since 1980. Sixty-six percent of these cities conducted a census in 1985 and 1986. Overall, the census results indicate that average household size has continued its downward trend.

Nationally, average household size has steadily declined, moving from 2.76 in 1980 to 2.69 in 1985. The cities listed in Table 1 (1985), Table 2 (1986), and Table 3 (1980 to 1986) show a similar pattern, although average household size remains lower in Washington State than at the national level. Washington's average household size was 2.62 in 1980 and 2.57 after 1980.

Household size was examined by housing type. In each housing category, over half the cities report a decline in average household size: 54 percent in single family units; 55 percent in multiples; and 52 percent in mobile homes and trailers. Household size by housing type and city size in eastern and western Washington is discussed below.

CITIES 2,500 AND OVER IN POPULATION

- Large cities experienced a more substantial drop in average household size for total housing types than did smaller cities.

- In the West, average household size in single family dwellings declined from 2.93 in 1980 to 2.90 since 1980, and in mobile homes and trailers, from 1.90 to 1.84.

CITIES 2,500 AND OVER IN POPULATION (CONT.)

- The greatest drop in household size for western Washington cities was in the multiple unit structures, where the 1980 figure of 2.09 declined to 1.71 after 1980 (a -22 percent change). This is the largest percent decrease among all housing types for large cities.

- In the East, household size dipped to 2.86 from 2.88 for single family units and dropped from 2.51 to 2.32 for mobile homes and trailers.

- Multiple unit structures in eastern Washington increased in average household size from 2.02 to 2.12. This is a notable exception to the overall trend and is due to the concentration of Hispanics in Washington's agricultural counties. Hispanic families are typically larger than the average and would, therefore, tend to drive up the average household size. Hispanics are more likely to live in duplexes and apartments than in single unit dwellings or in mobile homes and trailers.

CITIES LESS THAN 2,500 IN POPULATION

- Small cities in eastern and western Washington reported declines in household size in each housing structure category with the exception of mobile homes and trailers in western Washington.

- Multiple units, which typically have small numbers of persons, dropped from 1.87 to 1.58, a -18 percent change. This is the most dramatic decline among housing types for small cities.

- More western Washington cities reported household size declines in single family units (65%) than did those in eastern Washington (43%). However, in the multiple unit and mobile home and trailer categories, more eastern cities experienced declines.

CITIES LESS THAN 2,500 IN POPULATION (Cont.)

- In eastern Washington, single family units registered little change in average household size (2.67 in 1980 and 2.66 since 1980).

- The most significant change for smaller cities in the East was in duplexes and apartments, a -9 percent change, as household size slid from 1.75 to 1.60.

- Mobile homes and trailers in smaller eastern Washington cities remained fairly constant in household size, edging down from 2.51 to 2.49.

- In western Washington, single units showed a modest decrease from 2.74 persons per household in 1980 to 2.71 since 1980.

- The greatest change in household size is noted in the West where duplexes and apartments showed a percent change of -33, dropping from 2.04 to 1.53.

- The only increase in household size in western Washington's small cities was noted among mobile homes and trailers which grew from 1.81 to 2.07, a 14 percent change.

- Fifty-nine percent of the smaller western cities averaged more than 2.07 persons per mobile home and trailer since 1980.

Note: Annualized Rate = (1986 Census Average Household Size/Most Recent Census Prior to 1986 Average Household Size)*Nth Root

Mobile Homes/House Trailers contain Specials (housing units not intended for permanent occupancy, e.g., boats, travel trailers, etc.).

Informal counts are population counts that are considered accurate, but do not meet all special census certification requirements.

* This city is split among three counties. It is placed in the county which has the largest proportion of its population. The numbers reflect the city's total population.

POPULATION FORECASTS FOR WASHINGTON STATE BY COUNTY, 1980-2000

by

Felix D'Allesandro

In response to health, social service, and correctional facilities planning needs, the Office of Financial Management (OFM) has developed a series of annual county level population estimates and forecasts by age and sex to the year 2000. The figures presented here are an advance release of a more comprehensive report which will soon be available. The 1980 numbers are those from the federal census. The 1985 numbers are estimates that were developed for state revenue sharing purposes. The forecasted populations for 1990, 1995 and 2000 have been developed through analysis of historical population trends. Present and future economic factors have been considered. However, this forecast is driven primarily by expected population events (births, deaths, migration) rather than specific economic events (employment by industry). The controlling assumptions of this forecast are consistent with those published in, Forecasts of the State Population by Age and Sex: 1986-2010, released by OFM in December, 1985.

METHODOLOGICAL OVERVIEW

I. Development of County Population Totals

The estimated and forecasted resident populations for the counties are presented in Table 1. As noted above, the 1980 figures represent 1980 federal census counts. The 1985 populations were developed by OFM's census and estimation program for revenue sharing purposes. The figures for 1990, 1995 and 2000 were developed on the basis of a historical analysis of county and state growth rates since 1950.

The forecasted county totals were calculated with the assumption that the historical relationship between a county's growth and the state's growth would prevail for the next 15 to 20 years. In some instances

the extrapolation of a trend would yield unreasonable results. Therefore, further analysis was undertaken to assess the reasonableness of the projections. This analysis focused on the changing share of the state population implied by the continuation of the historical pattern. Some adjustments were made where warranted. The resulting populations were forced to sum to state controls (discussed below).

II. Development of County Age-Sex Population Distributions

The age-sex composition of each county over the forecast period was derived using an allocation model based on the relationship between the county and state age-sex proportions found in the 1980 census. It is assumed that the relationship between the 1980 county and state age-sex proportions remains constant throughout the forecast period. A three-step iteration procedure was used to develop the county age-sex distributions. First, forecasted county age-sex proportions were applied to the county population totals. Second, the resultant age-sex distributions for all counties were forced to the respective age-sex categories for the entire state. Finally, the adjusted age-sex distributions were summed to produce county population totals. This iteration procedure resulted in a good convergence for each county at each forecast year. Summed age-sex distributions for each county only show slight deviations from the forecasted control totals shown in Table 1.

III. Controls

The forecast presented here is a top-down forecast. Although the county populations were developed individually, the methodological approach assumed that as a group they would not deviate from the figures calculated in an independent forecast of the state's population. The primary reason for this approach is the known stability and behavior of large numbers in mathematical equations. More intuitively, the growth of the counties occurs in the context of the growth of the state. County borders are permeable. There is an interdependency of growth and development.

The county forecast is consistent with the current official state forecast. The state forecast is developed using a cohort component methodology. The method involves the carrying forward of the population by age and sex maintaining cohort, or age group, identity. The components of population change, births, deaths and net migration, are recorded and projected for each cohort.

The totals for each five-year-age/sex category (36 categories) are used as control figures for the county forecast. That is, the five-year-age/sex categories developed for each county will be forced to sum to these totals.
